PROFESSIONAL PORTFOLIO

Debashish Sarker

Assistant Manager – HR & Administration

HR leader who also builds the tools. This portfolio presents **PaySuite Workplace** — a full-stack HR, payroll and workforce platform I conceptualised, designed and built, now running live HR operations at PaySuite Fintech Limited.

98
JavaScript modules in one coherent codebase

110K+
lines of application code, written end-to-end

79
Firestore collections modelling the HR domain

5
role-based experiences: Admin, HR, Finance, Manager, Employee

WHAT YOU WILL FIND INSIDE

01 **Overview & Architecture**
The problem, the solution and how it fits together

02 **Module Map**
Everything the platform covers, at a glance

03 **Payroll & Compliance**
Bangladesh tax, PF, gratuity, bonus, deductions

04 **Time, Leave & Performance**
Policy-driven rules and a weighted score

05 **Talent Acquisition**
Recruitment pipeline, interviews and onboarding

06 **Engineering & Security**
Stack, roles, auditability and safe deployment

01 · OVERVIEW

One platform replacing spreadsheets, paper and scattered tools

HR teams in growing companies often run attendance, leave, payroll and hiring across Excel files and chat threads. PaySuite brings these into one governed system, with rules that follow Bangladesh Labor Law and income tax requirements.

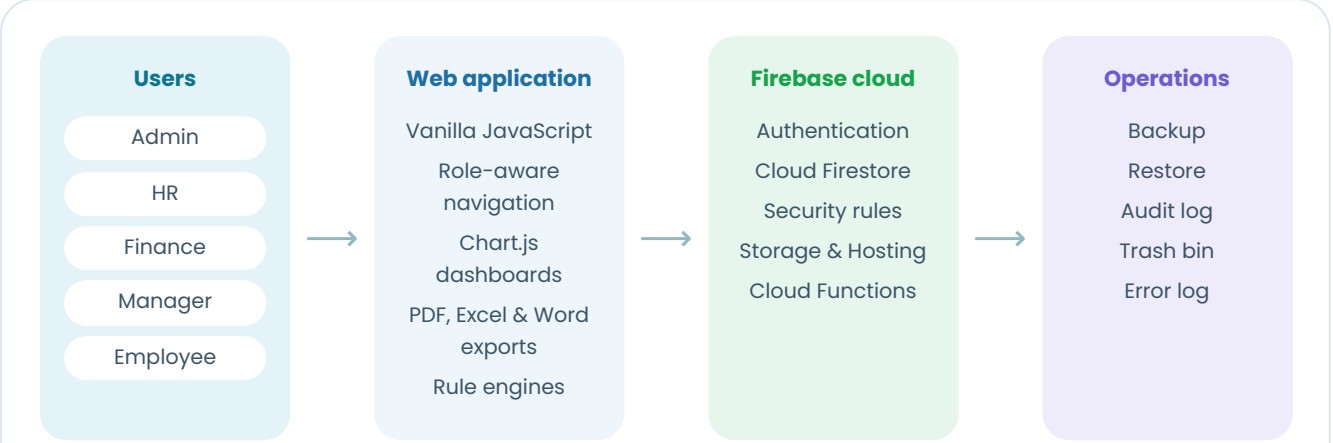

The problem

- Manual payroll with repeated errors and rework
- Leave and attendance rules applied inconsistently
- No single record for audits and statutory files
- No live view of headcount and cost for management

The solution

- Policy-driven engines: rules are configured, not hard-coded
- One employee record feeding every module
- Role-based access with audit trails
- Live dashboards for HR and senior management

SYSTEM ARCHITECTURE

WHO USES IT

Admin
Company settings, branding, backup, audit

HR
Employees, onboarding, leave, recruitment

Finance
Salary payments, ledgers, tax and PF

Manager
Team attendance, tasks, KPI and approvals

Employee
Self-service: leave, tasks, payslips, claims

Single source of truth

Employee data is entered once and reused by attendance, leave, payroll, tax and documents.

Configurable by HR

Leave policy, late rules, bonus rules and tax tables are settings, so no code change is needed to update a rule.

Built to be maintained

Modular numbered files, shared helpers and an automated standards check keep the code consistent.

02 · MODULE MAP

A complete HR suite, organised by purpose

30+ main pages and dozens of tabs across six areas. Menus, dashboards and actions are filtered by role, so each user sees only what matches their job.

People & Organisation

- Employee directory & profile
- Departments & branches
- Staff categories
- Organisation chart
- Employee change ledger
- Manager Hub for team leads

Time & Leave

- Attendance with correction requests
- Late rules & exemptions
- Leave policy & balances
- Leave approval workflow
- Earned leave & carry-forward
- Holidays & shifts

Payroll & Finance

- Salary sheet & payroll run
- Payslips & payment register
- Income tax & challan copies
- PF, gratuity & bonus
- Advance & conveyance claims
- Lunch subsidy management

Talent & Lifecycle

- Recruitment pipeline (ATS)
- Public careers page
- Interview calendar & slots
- Offers & onboarding
- Resignation & exit
- Final settlement

Performance

- KPI & objectives
- Task management
- Work progress tracking
- Composite performance score
- Appraisal cards
- Salary analytics

Admin & Control

- Company settings
- Audit log & error log
- Backup & restore
- Export centre & branding
- Asset management
- Notification settings

Communication & collaboration

Announcements with attachments and acknowledgement, reminders, a shared calendar with email invitations, and in-app notifications.

Documents & reporting

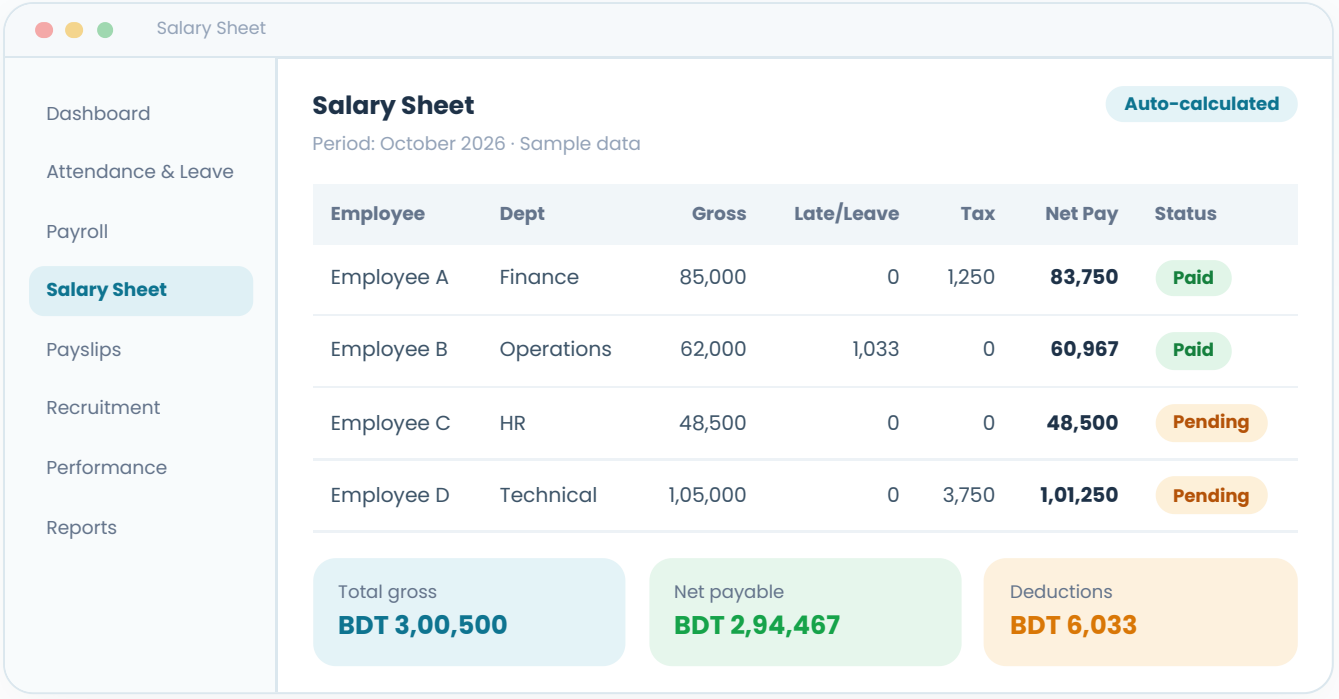

Letter and certificate generator, document management, salary analytics, lifecycle charts and one-click PDF, Excel or Word exports.

Role-aware by design. An employee sees My Work, a manager sees My Team, and HR sees the full organisation view — enforced in the interface and again in Firestore security rules.

03 · PAYROLL & COMPLIANCE

Payroll that follows the law and shows its working

Calculation logic lives in dedicated engines, each acting as the single source of truth. Salary sheet, payslip, payroll run and final settlement all read the same figures, so they always agree.

Illustrative interface with sample data

Income tax engine

Individual slabs, category thresholds and festival bonus folded into taxable income. Rates sit in configuration and update without code changes.

PF & gratuity

Gratuity follows the Labor Act basis of 30 days' basic wage per completed year, with eligibility rules and a configuration tab for rates.

Festival bonus engine

Bonus count, percentage, month and eligibility are set once and detected automatically when a salary sheet is generated.

Deductions & recoveries

- Late and half-day policy with grace count
- Unpaid leave pay-cut by chosen basis
- Salary advance recovery with safe caps

Payments & ledgers

- Bank, bKash, Nagad, cash and cheque
- Partial payments with outstanding dues
- Employee ledger with full history

Records & evidence

- A4 payslips and acknowledgement vouchers
- Salary payment register
- Tax challan copies and certificates

Rules HR can read, change and trust

The leave policy is saved as versions, so changing it never rewrites the past. Every request is checked against the policy in force on the leave date.

Leave request decision flow

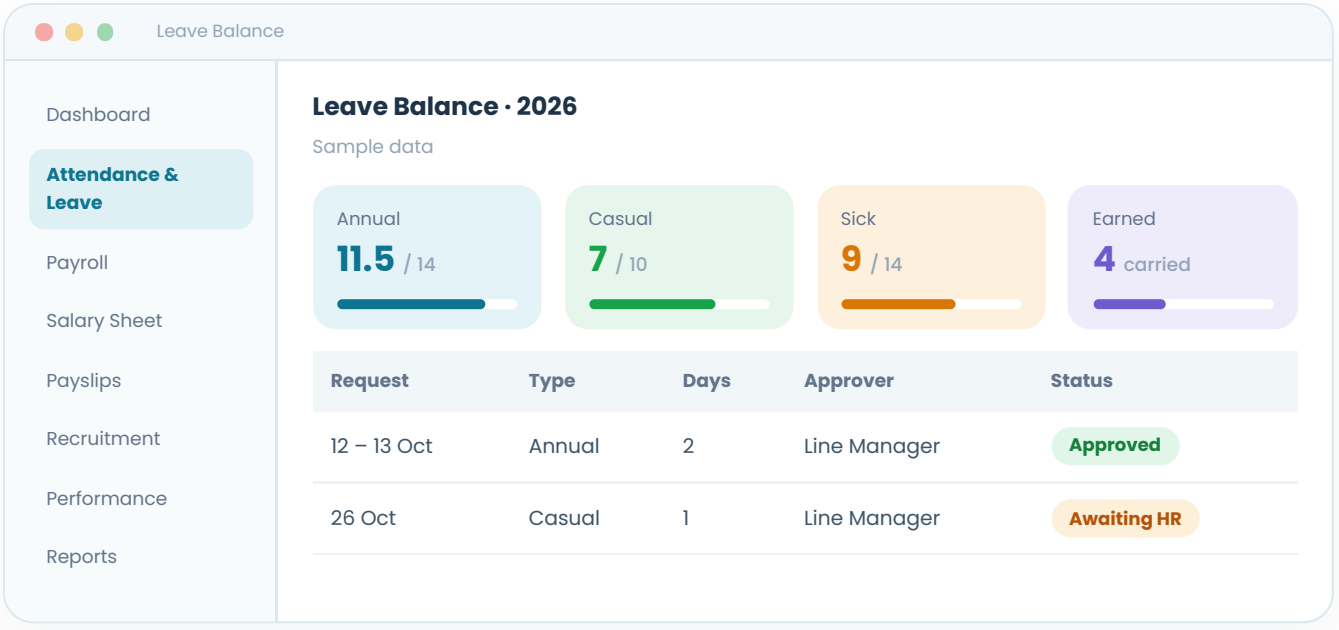

1. **Leave type enabled?**
   If switched off in policy, the request is not accepted.
2. **Eligibility check**
   Gender-specific leave and waiting months are verified, with the reason shown.
3. **Balance check**
   When balance runs out: block, take as unpaid, or draw from annual leave.
4. **Salary impact**
   Unpaid days flow into the same deduction used by payroll and payslips.

Performance score

Attendance, tasks and manager-reviewed KPIs combine into one monthly score per employee.

Weights are configurable. Task priority multipliers and late-arrival penalties are part of the engine.

Illustrative interface with sample data

Attendance control

- Daily mark-attendance grid with Present, Absent, Late, Half-day and WFH
- Correction requests with approval and a record trail
- Late-deduction rules with grace count and exemptions

KPI workflow

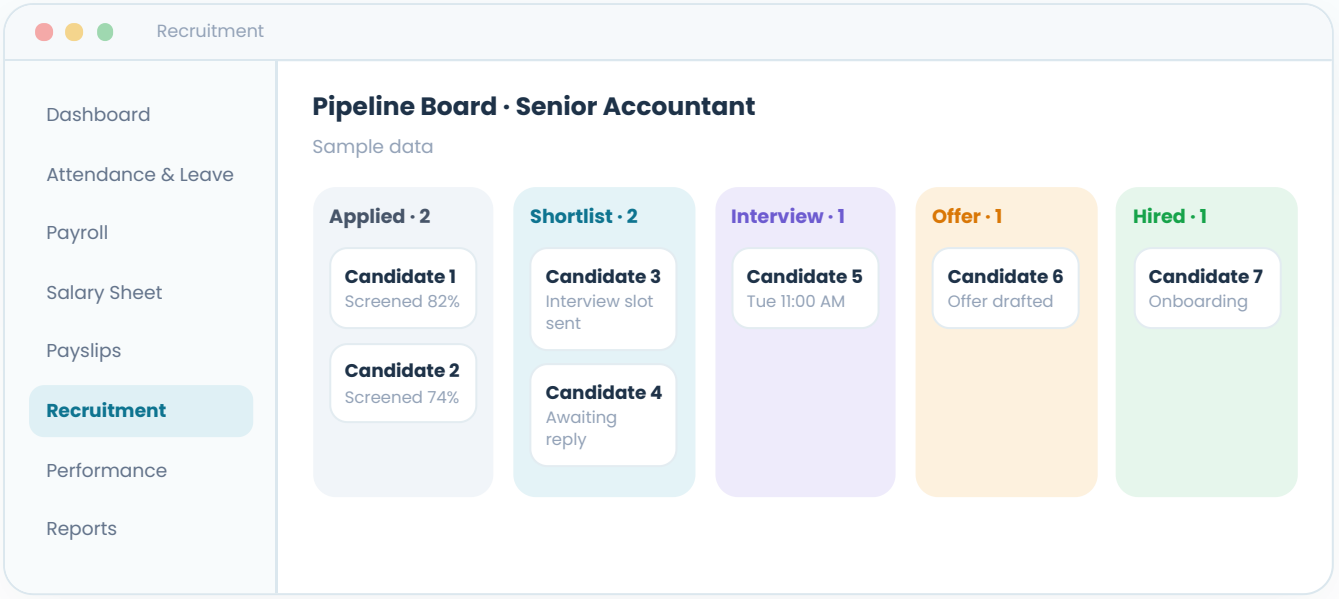

Draft › Active › Under review › Completed › Locked

Role-gated comments, weighted summaries and Firestore rules that enforce the locked state.

05 · TALENT ACQUISITION & LIFECYCLE

From job post to first day in one connected flow

Recruitment, interviews, offers and onboarding share one candidate record, so nothing is retyped between stages and every decision leaves a trail.

Illustrative interface with sample data

Smart screening

Criteria extracted from the job post are used to score applicants, with a spam shield for the public careers form.

Interview scheduling

Slot-based calendar, bulk scheduling and email invitations reduce back-and-forth with candidates.

Offers & templates

Reusable email templates, offer letters and a governance step before an offer goes out.

Employee lifecycle

Job requisition > Recruitment > Onboarding > Employment > Resignation > Final settlement

HR can send an onboarding form back for correction, and resignations follow a configurable approval workflow with final settlement figures taken from payroll.

06 · ENGINEERING & SECURITY

Built like a product, run like a service

The platform is multi-tenant: one master codebase is distributed to separate client deployments, each on its own Firebase project, so data stays isolated per organisation.

Technology stack

HTML5 · CSS3 · Vanilla JavaScript · Firebase Auth · Cloud Firestore · Firebase Hosting · Storage · Cloud Functions · Chart.js · jsPDF · ExcelJS · docx · AI-assisted development

No heavy framework: fast first load, easy to host and straightforward to hand over.

Access & data protection

- Role-based access in the interface and in 2,295 lines of Firestore rules
- Separate Storage rules for uploaded files
- Input validation across forms
- Audit log, error log and employee change ledger
- Full-codebase security review covering data exposure and XSS risks

Backup & restore

Full-system backup export with restore, plus a trash bin so deleted records can be brought back.

Safe rollout

A Deployment Manager shows differences, takes a backup and supports rollback before updates reach each client.

Tenant isolation

Each client has its own Firebase project and branding, with fallbacks that prevent developer branding from reaching customers.

How a change reaches a client

1. **Build** — Change on master
2. **Check** — Standards script
3. **Diff** — Compare per client
4. **Backup** — Snapshot first
5. **Deploy** — Rollback ready

Design system

Shared design tokens, common modal and dropdown behaviour, one money formatter (BDT with lakh/crore grouping) and one export standard keep every screen and document consistent.

Quality habits

Each module is reviewed against its dependent modules before release — for example, a leave change is traced through salary sheet, payslip and final settlement.

07 · IMPACT & PROFILE

Where HR experience meets hands-on building

I understand the people processes because I run them every day, and I build the tools that make them faster and more accurate.

Zero
major findings across internal and external audits

40+
hires managed end-to-end

6-Year
manpower plan and HR cost budget (2025–2030)

Career snapshot

'24 **Assistant Manager – HR & Admin · PaySuite Fintech Limited**
Mar 2024 – Present · Full HR lifecycle, in-house HRMS build, HR business partnering

'19 **Assistant Manager / Senior Executive – HR · Archaic Architects Limited**
Sep 2019 – Feb 2024 · Payroll, grievance framework (-20% grievances), performance appraisal

'18 **HR Officer / Production Officer · Supreme Stitch Limited**
2018 – 2019 · HR operations in a manufacturing environment

Education & languages

MBA – HRM, University of Dhaka (2017)
BBA – HRM, American International University-Bangladesh (2015)
Languages: Bengali (native), English (professional)

Core strengths & tools

Payroll & Compensation · Labor Law · HRIS & Automation · Workforce Planning · Performance Mgmt · Recruitment · Employee Relations · MS Office · Google Workspace · Odoo · Tally · WordPress · Excel Reporting
